Every once in a while in glancing over our exchanges we see a financial exhibit made by various county and municipal corporations. In these statements is set forth the various amounts of cash received from fines, taxes, etc., and the amount disbursed and for what it was expended. Some towns and counties make semi-annual statements of the condition of their finances. On part of the tax payers of Louisa and Lawrence counties we respectfully ask for an exhibit of our condition as a town and as a county. The people want to know, you know.

Prof. H. T. Lyttleton, of Louisa, who conducted the Teachers' Institute at this place last week, is undoubtedly one of the most zealous and effective workers in the interest of the noble cause of education in Kentucky. We have heard several teachers say they improved greatly under the instruction of Prof. Lyttleton. If every county in Kentucky possessed a worker in the cause like Prof. Lyttleton we would soon see a radical change in the educational affairs of Kentucky. Institutes are valuable to teachers when they have competent instructors. Otherwise they are a needless waste of time and money.—Pike County Times.

Mr. Robert Crutcher, an old and well known citizen of Louisa died last Saturday night.

About the first of January he was stricken with paralysis, only partial at first, but about before his death it became general, and his death was like the going out of a light.

Mr. Crutcher was known to nearly all Sandians, he having lived in this country many years. We believe he came from the neighborhood of Elizabethtown, Ky., where he has relatives yet living. He was an honest, industrious man, liked by everybody. He was buried with the honors of Masonry by Apperson Lodge, Vinson Lodge, of Cassville, participating. The burial services were held at the M. E. Church South, Revs. Hager, Smith, and Riddle officiating, and the remains were followed to the grave at Pine Hill Cemetery by a large concourse of friends.

Ensilage for Milch Cows.

The experiments and experiences of the past two years are thoroughly confirmatory of the idea, that if in the filling or immediately thereafter, a high heat can be induced which shall pervade the mass in the silo, and then, all tightly closed, the ensilage will remain sweet until it is re-opened, and an opportunity to ferment is offered by exposure to the air. These results are attained by not to rapid filling, nor too much tramping the temperature being watched, and as soon as that of one layer or portion reaches, say one hundred and thirty degrees Fah., another layer of three or four feet in thickness may be added leveled off, asked a little around the sides, and left for a day or two to heat in turn. Pile filled in this way last year, turned out beautifully, and the cattle, especially milch cows, have had healthful, excellent feed, fragrant and sweet, and of course, highly relished. When such can become the general or universal condition of ensilage on good farms, the objections to its use will disappear. Heating of ensilage is promoted by cutting, by which the juices are exposed to the action of ferments, the germs of which are almost universally distributed in the atmosphere near dwellings and farm yards. The very best cutting which used to be recommended, is probably unnecessary, but neither corn nor clover, when backed whole, come into a uniform heat, and we presume the same would be true of other ensiled plants.—American Agriculturist for September.
